

Listing of Claims

1-55. (Cancelled)

56. (Previously Presented) An off-axis printing-fluid container configured to hold a volume of printing fluid, comprising:

a front face including a top edge, a bottom edge, a right edge, and a left edge;

a body including a latching surface spaced rearward the front face, wherein the front face and the body are exterior an inner cavity;

an air interface passing into the inner cavity through the front face proximate the top edge and distal the bottom edge;

a printing-fluid interface passing into the inner cavity through the front face proximate the bottom edge and distal the top edge;

a first recessed portion of the front face intermediate the air interface and the printing-fluid interface and proximate the air interface; and

a second recessed portion of the front face intermediate the air interface and the printing-fluid interface and proximate the printing-fluid interface, and wherein the first recessed portion and the second recessed portion extend into the inner cavity.

57. (Previously Presented) The off-axis printing-fluid container of claim 56, further comprising a third recessed portion of the front face intermediate the first recessed portion and the right edge and a forth recessed portion of the front face intermediate the second recessed portion and the right edge.

58. (Previously Presented) The off-axis printing-fluid container of claim 56, wherein the body includes a rear portion having a width less than a width of the front face.

59. (Previously Presented) The off-axis printing-fluid container of claim 58, wherein the latching surface is intermediate the front face and the rear portion.

60. (Previously Presented) The off-axis printing-fluid container of claim 59, wherein the latching surface is substantially parallel to the front face.

61. (Previously Presented) The off-axis printing-fluid container of claim 56, further comprising an electrical interface on the front face intermediate the first recessed portion and the left edge.

62. (Previously Presented) The off-axis printing-fluid container of claim 56, further comprising a free volume of printing fluid held within the inner cavity.

63. (Cancelled)

64. (Previously Presented) The off-axis printing-fluid container of claim 56, wherein the first recessed portion and the second recessed portion extend at least approximately 15 millimeters from the front face into the inner cavity.

65. (Previously Presented) The off-axis printing-fluid container of claim 56, wherein the third recessed portion and the forth recessed portion extend into the inner cavity.

66. (Previously Presented) The off-axis printing-fluid container of claim 65, wherein the third recessed portion and the forth recessed portion extend at least approximately 12 millimeters from the front face into the inner cavity.

67. (Previously Presented) The off-axis printing-fluid container of claim 56, wherein the front face and the body define the inner cavity.

68. (Previously Presented) The off-axis printing-fluid container of claim 56, wherein a single structural piece forms the front face.

69. (Previously Presented) The off-axis printing-fluid container of claim 56, wherein the bottom edge includes a protruding portion extending away from the top edge and aligned with the air interface, the first recessed portion, the second recessed portion, and the printing-fluid interface.
